

```
/*
```

user define function :- It is define by user for specific task.

three parts of udf

1-FUNCTION PROTOTYPE/function declaration(above of main())

2-function call(in main()'s body)

3-function body/definition outside of main()

```
void display(); //prototype or declaration
```

```
conio.h
```

```
void main()
```

```
{
```

```
    display(); //function call    UDF
```

```
    getch(); //function call
```

```
}
```

```
void display()
```

```
{
```

```
    //coding
```

```
}
```

example

```
*/
```

```
#include<stdio.h>
```

```
#include<conio.h>
```

```
void display();//prototype
```

```
void main()
```

```
{
```

```
    clrscr();
```

```
    display(); //function call
```

```
    // getch();
```

```
}
```

```
void display()    //definition -void display-function header,body
```

```
{
```

```
    printf("Akhilesh \n");
```

```
printf("Nikita\n");  
getch();  
}
```
